OVERVIEW
This course introduces the API (Application Programming Interface) and Ingeniux REST API, allowing developers to extend the functionality of their Ingeniux CMS and allowing for the integration of services and data from outside the CMS environment. Attendees will leave this course with the knowledge necessary to develop scripts and programs to interact with the application and perform certain tasks, e.g. creating content in the CMS through an outside form, automatically archiving old content, and suggesting taxonomy categories as part of a workflow.

WHO SHOULD ATTEND
• Web Developers
• Application Integrators

PREREQUISITES
Ingeniux CMS Fundamentals and Ingeniux CMS Development and Implementation. Alternatively, individuals that attend this course must have strong HTML and CSS skills (2+ years), have working knowledge of JavaScript, and have working knowledge of ASP or other web server technology.

WHAT YOU’LL LEARN
In this course you will learn how to...

• Work with the Ingeniux API
• Create a custom hook
• Use custom hooks to interface with the API
• Create a custom tab
• Use custom tabs to perform API-driven tasks
• Create a custom workflow action
• Use custom workflow actions to access the API
• Populate CMS select lists dynamically
• Set up an automated task
• Create a task for the Automated Task Module

SUPPLEMENTAL MATERIALS
Each participant will receive a copy of the Ingeniux Learner Guide along with a week of access to a server beginning immediately after training ends, and access to the Ingeniux training forum.
